SUBJECT: Chem-Solv, Inc. DATE: November 5, 1991
Soil Sampling Results From August 28 and 29, 1991

FROM: Reginald F. Harris, Toxicologist *RFH*
Technical Support Section (3HW15)

TO: Stephanie Dehnhard, RPM *PH*
Delaware/Maryland Section (3HW25)

Upon review of the soil analytical data from the August 28 and 29, 1991 soil sampling activity, it has been determined that the contaminants of concern identified in soils at the Chem-Solv, Inc. Site pose no threat to human health. This determination is based upon comparison of soil sampling data to off-site background contaminant levels, ranges of and average contaminant levels commonly found in the soils of the area and/or in the Eastern United States, and by comparison of the levels of the constituents detected in the soils to the levels found in the Risk-Based Concentration Table generated by Roy Smith of this Region.
